

Status: Advisory Teams

John Graybeal

Stoplight

There are some things that need attention, either because they don't represent MMI well, or are insufficient for meeting community needs.

Big Wins

- Reasonably robust Steering Committee engages monthly.
- Upwards of 25 people getting updates via the Technical Advisory Panel (TAP).
- Graceful progression from Steering Committee to TAP.
- Drupal capabilities (esp. groups) are great.

Targets

- Good advice from engaged community.
 - *Scientists. Data managers. Ontologists.*
- Know what's going on (don't look silly).
 - *Technical experts. People in the know.*
- Community considers us pre-eminent.
 - *Program managers/funders. Community leaders.*

Issues and Needs

Short Term

- Keep up
 - TAP and other MMI reporting
 - Steering Committee rotation
 - Preparations for meetings
- Start the Science Advisory Panel
- More Drupal support and features

Issues and Needs

Longer Term

- Become pro-active to meet the needs.
 - Make community connections.
 - Become the obvious place for this kind of data management/metadata information.
 - Be a way for people to communicate with their target audiences.
- Enhance the Science leadership of the project.
